NAIJASPA.NG

Wellness marketplace · Nigeria

FOUNDER BRIEFING

Launch status

A plain view of what is already built in the NaijaSpa product, and what must still be connected before paying customers can book for real.

Date: 24 October 2026
Code: github.com/venzorah/NaijaSpa
Live target: naijaspa.ng

PRODUCT IN CODE

Customer, vendor, and admin apps are built: search, booking flow, PWA, Paystack wiring, galleries, split login, Explore directory.

NOT LIVE FOR MONEY YET

Real bookings need production Postgres, live Paystack keys, domain HTTPS, legal copy, and at least one real vendor. Until then it is a preview.

Dark Room / 18+ stays a homepage teaser only — it is not a product to launch.

1. What has been done

CUSTOMER

- Installable PWA with splash on first open, light default and optional dark
- Home hero with treatment slides and premium vendor ads
- Find a therapist: treatment, state, city — Use my location opens Explore
- Statewide coverage (Abuja / FCT as one area); GPS sorts, does not hide therapists
- Explore directory with sidebar filters and provider cards
- Provider / service pages with swipeable photo gallery
- Stepped booking, Paystack checkout, account, bookings, favourites
- Ask NaijaSpa AI (catalog search; LLM optional)

VENDOR

- Onboarding, services, Hotel / Home add-on prices
- Therapist galleries (admin-capped images; video on paid plans)
- Bookings, earnings, subscriptions

ADMIN

- Vendor invite and commercial settings (commission, gallery limits, home rails, plan prices)
- Finance of verified payments only
- CMS placeholders for about, contact, privacy, terms

RECENT PRODUCT POLISH

- Client and SPA Therapist signup on one themed split screen
- Google / Gmail sign-in path
- Explore restyled as a discover-providers directory
- Homepage finder no longer jumps back to the hero after location
- Where (spa / hotel / home) removed from the homepage search card

ENGINE

- Next.js 15, Prisma 6, PostgreSQL, amounts in kobo (NGN)
- Bookings confirm only after Paystack verify or signed webhook
- No card numbers stored

2. Must-do before a real launch

Do these in order. Until they are done, treat the site as a preview — not a live marketplace.

Blocker	What "done" looks like	Status
Production Postgres	Neon / Supabase / RDS URL on Vercel. Run *prisma migrate deploy*. Demo catalog off.	BLOCKED
Secrets & APP_URL	Live *AUTH_SECRET*, *APP_URL=https://naijaspa.ng*, Paystack live keys. Never commit secrets.	BLOCKED
Paystack live	Approved live account. Webhook */api/payments/webhook* for *charge.success*. One real paid booking confirms.	BLOCKED
Domain & HTTPS	naijaspa.ng (and www) point at this app. TLS on. Old marketing page replaced.	BLOCKED
Commercial prices	Admin sets weekly / monthly / six-month vendor plan prices (seeded at ₦0).	ADMIN
One real vendor	Approved public spa with services, city/state, photos. Not demo Osun / Olive / Maitama Hands.	BLOCKED

3. Strongly recommended before public launch

Item	Why it matters	Status
Photo storage	Gallery uploads sit on the server disk. On Vercel that disk is wiped on redeploy. Use S3, R2, or Vercel Blob.	MISSING
Transactional email	Password reset currently writes an in-app token only. Need email for reset, booking confirmed, vendor alert.	MISSING
Legal copy	Privacy, terms, about, contact are short placeholders. Need NDPR, cards, cancellation, vendor liability.	DRAFT
Monitoring & backups	Error tracking, uptime on home and webhook, scheduled Postgres dump, one restore drill.	OPS
Device QA	iPhone Safari + Android Chrome + installed PWA: splash once, finder, GPS, booking, Paystack, galleries.	QA
Seed accounts	Do not put demo users or the public staging password on production. Seed plans and config only.	OPS

4. After launch — not required on day one

Item	Note	Priority
OpenAI for Ask NaijaSpa	Local parser already searches the catalog.	OPTIONAL
Web push	Structure only; needs VAPID keys and a sender.	LATER
Full i18n	EN / FR / DE / ES exist for nav and install copy only.	LATER
SMS / WhatsApp reminders	Not built. Cron secret is a placeholder.	LATER
Refunds desk	Booking cancel states exist; no Paystack refund UI.	LATER
Dark Room +18	Homepage teaser only. Will not ship as a real catalogue.	OUT OF SCOPE

5. You may call it launched when

- ☐ naijaspa.ng serves this app over HTTPS
- ☐ Postgres is live and the demo catalog is off
- ☐ A new customer can register, search a state, book, pay Paystack, and see **confirmed**
- ☐ The vendor sees the booking and a pending earning
- ☐ Admin sees the payment as success
- ☐ Privacy and terms are real documents
- ☐ Backups exist and the Paystack webhook is green on a live *charge.success*

Until every box is true, NaijaSpa is a **preview**.

6. Launch-week order of work

1. Staging: migrate database, Paystack **test** charge end to end.
2. Production database: migrate. Do not seed demo people.
3. Set live keys, webhook, and *APP_URL=https://naijaspa.ng*.
4. Admin: plan prices, commission, gallery limits.
5. Invite 1–3 real vendors; they add services and photos (on durable storage).
6. You book and pay a real ₦ amount; confirm booking and earning.
7. DNS cutover. Watch webhooks and errors for 24 hours. Take a database dump.

Longer technical notes live in the repo: *docs/NAIJASPA-LAUNCH-GUIDE.md*, *docs/OPERATIONS.md*. This briefing is for go / no-go, not day-to-day commands.
